The effectiveness of the worldwide Covid-19 vaccination rollout is amazing to observe in real time. In regions with elevated vaccination rates, where approximately 50% to 60% of the population has received at least one dose, new cases are plummeting, hospitalization and deaths are exceedingly rare events and economic normalization is accelerating. Importantly, studies suggest that the currently available vaccines are also very effective at preventing serious illness against the known variants, which vastly reduces the risk of any further lockdowns. Although some regions of the world are still suffering from the pandemic, hopefully a global, coordinated push to improve vaccination rates will finally bring transmission of the Covid-19 virus under control.

Other than improving vaccination rates, the most important market-moving event of the past month was the FOMC meeting on June 16th since it is US monetary policy that will shape the path of future investment returns over the medium term. At the conclusion of the most recent meeting, members of the FOMC took two initial steps towards the normalization of monetary policy. First, although they agreed to continue purchasing \$80 million of Treasury securities per month and \$40 million of agency mortgage-backed securities per month, Chairman Powell indicated during the press conference that tapering discussions are now appropriate due to increased confidence in the economic recovery. Second, the interest rate dot plot shifted from a median interest rate projection of no hikes in 2023 to two hikes in 2023, with 14 out of 18 FOMC members looking for at least one hike by the end of 2023.

The changes, whether hawkish or simply more realistic depending on one's base case assumptions, triggered an immediate flattening of the yield curve and another snap rotation in the equity markets (but this time from the cyclicals back into the secular growth trade). The simplest explanation of the market's reaction is that the scenario of runaway inflation is no longer plausible and the worry that the Fed is "behind the curve" is no longer credible. However, shifting rate hikes forward into 2023 suggests that expectations for long term growth may need to be moderated, hence rotation back into the secular growth trade and mega cap technology stocks. We view the outcome of the FOMC meeting as entirely consistent with the Fed's dual mandate of price stability and maximum full employment, which is positive for equity market returns over the medium term.

Over the near term, equities have generally faced some headwinds leading up to and during periods of tapering and rate hikes. However, if Chairman Powell can successfully engineer a normalization of monetary policy without shocking the markets, solid investment returns should continue through at least 2023 since we are likely many years away from real monetary tightening. With

long-term interest rates still well below 2.0% (the US 10-year Treasury bond yield is currently pinned around 1.50%) and earnings growth of approximately 35% in 2021 and approximately 12% in 2022 (according to FactSet), earnings multiples can remain elevated relative to historical levels although they may gently trend lower over time. We would therefore characterize the current environment as mid-cycle, where positive investment returns depend on identifying companies with accelerating earnings, cash flow and dividend growth. Essentially, we think this environment bodes well for the relative performance of our dividend and real asset strategies over the medium term.

Top contributors to the year-to-date performance of the Ninepoint Global Infrastructure Fund by sector included Energy (+338 bps), Industrials (+226 bps) and Real Estate (+178 bps) while top detractors by sector included Utilities (-120 bps) and Communication (-47 bps) on an absolute basis.

On a relative basis, positive return contributions from the Industrials (+273bps) and Information Technology (+43 bps) sectors were offset by negative contributions from the Energy (-121bps), Utilities (-61bps) and Communication (-50 bps) sectors.

Source: Ninepoint Partners

We are currently overweight the Energy, Industrials, Information Technology sectors, while underweight the Utilities sector. As the global economy reopens, sharp sector rotations are occurring underneath the surface of the broad indices. We are looking to position for the middle phase of the investment cycle, where above-average earnings, cash flow and dividend growth can compensate for some degree of multiple-compression due to rising interest rates.

This past month, President Biden announced support for the \$1.2 trillion (a combination of new spending plus baseline spending over eight years) bipartisan infrastructure framework. The agreement, negotiated between a small group of Democrat and Republican senators, still requires passage in Congress but the details are broadly positive. By segment, the most important dollar allocations are as follows: \$312 billion for traditional transportation infrastructure, \$73 billion for power & grid, \$65 billion for broadband and \$55 billion for water. Importantly, the sources of funding do not include an increase in the corporate tax rate, a gas tax or electric vehicle fees. We are positioned in various engineering & construction plays and infrastructure concession owner/operators in order to take advantage of the massive fiscal spending package.

Further, we continue to believe that infrastructure stands to benefit significantly from the

reopening trade, especially sub-sectors that are tied to mobility, such as road & rail, ports & airports and even oil & gas storage & transportation and are positioned accordingly. In the near-term, the momentum powering the reopening trade should be able to overcome any potential valuation headwinds related to a minor increase in the US 10-year Treasury bond yield.

Source: Ninepoint Partners

The Ninepoint Global Infrastructure Fund was concentrated in 30 positions as at June 30, 2021 with the top 10 holdings accounting for approximately 38.9% of the fund. Over the prior fiscal year, 21 out of our 30 holdings have announced a dividend increase, with an average hike of 5.4% (median hike of 6.9%). Using a total infrastructure approach, we will continue to apply a disciplined investment process, balancing valuation, growth and yield in an effort to generate solid risk-adjusted returns.
